

Inserting instrument ranges

I put the instrument ranges as small notes in a bar before the first bar like this.

- Create an irregular bar before the first bar of crochet (quarter note) length using Alt B.
- Number this bar as bar 0 using Create>Other>Bar number Change and then click on and hide this bar-number with Ctrl Shift H.
- Hide the bar line with Create>Barline>Invisible.
- Highlight the part by “treble clicking” a bar then use Plugins>Analysis>Find range.
- Select the rest in bar 0 and create a chord for the lowest and highest notes in the range.
- Select either note in the chord and remove the tail with Alt Shift 8 (does not always work on old scores - in which case increase the magnification and drag the tail to reduce its length to zero).
- Select both notes and on Keypad 2 press the Enter key to reduce the size.
